VM Troubleshooting – Q&A

Prof. Dr. Mathias Fischer, August See

Q1: The screen stays black directly after booting or when resizing the VBox window   One root cause might be the video settings of your VM. Shutdown the VM first. In VirtualBox, go to the settings of your VM and select `Display` in the left menu list. Check that the monitor count is set to a valid number. If your `Video Memory` is the initial 16MB, try to increase this value, e.g., to 64MB.
